But Note, that in such of these Places as lie open to the Sea, and where no great Rivers are, the Quarter-Moonhigh-waters, hold out longer than the times shewed by this Reduction, near half an hour.

As also that, when by reason of the long Droughts in Summer, or continual hard Frosts in Winter, the fresh Waters are low; or when the Wind blows hard at N, or N.W. the Tides may hold up longer in the River of Thames, than the Times shewed in the Table. But when the Wind is strong at W. or W. by S. or there are great Freshes; they hold not out so long, but the difference is seldom above half an hour.
